TABLE II.

VARIATION IN POPULATION SINCE 1871.

NOTE.—At the 1871 census the three agencies were not enumerated separately from the districts to which they are attached, and their population in that year is not ascertainable.

Columns 3, 11 and 15 give the figures of the census of 1891 adjusted for changes in the area of districts which occurred between 26th February 1891 and 1st March 1901, and column 6 represents the difference between these adjusted figures and the population at the present census. These adjustments cannot, however, be carried further back. The figures in the columns headed 1881 therefore give the population of each district as it stood at the time of the census of that year, and column 7, showing the variation in the decade 1881–1891 gives the variations (taken from Table II of the 1891 census) between the population of each district at that census and the figures of the 1881 census adjusted for changes in the area of districts which occurred in the decade 1881–1891. Similarly with the figures in the columns headed 1871, and in column 8, giving the variations between 1871 and 1881.

In column 9, showing the variation between 1871 and 1901, two figures are entered in the case of all districts in which changes of area have occurred during that period. The first shows the difference between the figure in column 3 and that in column 5 and thus takes no account of changes in area. The second (that in brackets) gives the sum of the variations in columns 6, 7, and 8, and thus shows the difference between 1871 and 1901 in the population of the area which in 1871 constituted the district. The difference between the first and the second figure is the net result of all changes in area which have occurred in the period 1871–1901. The difference between these two figures in the case of the total for British Territory is similarly the net result of the transfers of area to and from the Presidency during the same period. The two transfers which have occurred are specified in the footnotes to the Table.
